

## RapidRun™ Saves Schools Time and Money in A/V Installation.

RapidRun is the ideal system for both pre-wire and retrofit applications. Completely eliminating the need for field termination, this system truly is “pull, plug and play” – saving integrators and contractors installation time and headaches with a flexible, reliable cabling product that is extremely easy to install through existing conduit.

RapidRun’s versatility and ease of use is especially beneficial for schools – where technology in the classroom plays a more prominent role than ever. Today, school systems all over the country are realizing the advantages of using RapidRun for the installation of projectors and other audio/visual equipment.

### The Project

A school system in Florida was in the process of building new classrooms for the 2007 school year, and wanted those classrooms to be equipped with the latest projectors and multimedia equipment. But they had quite a large number of classrooms to outfit in a short amount of time – 900 to 1,000 classrooms in all. Needless to say, it was crucial that the cabling system behind this technology was time-saving and easy to install, as well as cost-effective.

### The Solution

RapidRun offered just the end-to-end solution this Florida school system needed. Its flexibility allowed their contractor to simply select the appropriate Break-Away Terminations, wall plates or flying leads and match it with the appropriate end to configure the system. What typically would have taken hours in installation time only took minutes to complete ... freeing the contractor’s time for other projects and yielding significant profit gains.

### Upgrades

As the school continues to grow to keep up with today’s technological demands, the RapidRun system can be easily upgraded to support new applications. Best of all, they’ll be spared the cost of rewiring the facility – since RapidRun is uniquely designed with the ability to use existing conduit without the need for running extra wires. Ultimately, by using existing conduit in the future, the school’s contractor will be able to completely upgrade each classroom in less than 30 minutes.

### Results

Using RapidRun, the Florida school system saw a substantial increase in efficiency, completing its large project in record time. In fact, installation time was reduced by half for each classroom. Also, because of RapidRun’s very affordable pricing, they also saved money in the process. And lastly, the school can be reassured knowing that when the time comes for a change, RapidRun’s easy-to-upgrade format will be able to grow right along with them.

### The Bottom Line:

RapidRun provided this satisfied school with unsurpassed timesavings and a great return on investment – and set the example for many other school systems in the state to follow suit.
