

USB 2.0 to HDMI® and VGA with Audio

Add up to six additional displays without another video card

The Trulink USB to HDMI and VGA Adapter is a flexible solution for connecting laptops or desktops to monitors and/or displays using both analog (VGA) and digital (HDMI) signals. Connect both HDMI and VGA to view the same content across two displays using the included USB cable, while enjoying stereo audio through the HDMI and/or 3.5mm audio connection. The adapter supports primary, extended, mirror and rotated displays modes and allows for the addition of up to six displays with minimal configuration and without any additional graphics cards. Not only is the adapter simple to use and cost effective, it's also bus-powered so an external power cord is not required. Its compact size also makes it portable so you can use it anywhere.

Features:

- Supports both VGA and HDMI out of a USB cable at 1920 x 1080 resolution
- Supports viewing in:
 1. Primary
 2. Extended
 3. Mirror
