

TruLink® wireless solutions offer reliable wireless transmission of data, audio and video signals.

We employ a variety of wireless technologies to ensure the best performance for many different applications.

TruLink Ultra Wideband (UWB) products were developed to perform in PC-based applications where high transmission speeds are required. These products are certified by the USB Implementers Forum ensuring compatibility with all USB devices. Our Ultra Wideband wireless products deliver solid performance up to 30ft line of sight. The TruLink UWB system can support up to six computers sharing one device (such as a projector or monitor) or one computer connecting up to six devices. This can be accomplished by purchasing separate adapters to fit your application.

Note: • Kits are complete solutions that include a host adapter and device adapter

- Separate adapters are individual adapters that can be added to accommodate additional hosts or devices (each solution requires at least one host adapter and one device adapter)

Item#	Description	Item#	Description
2403-29570-ADT	Trulink 4-Port Wireless USB Hub And Dongle Kit	2403-29578-ADT	Trulink Wireless USB Host Adapter
2403-29571-ADT	Trulink 1-Port Wireless USB Device And Dongle Kit	2403-29595-ADT	Trulink Wireless 3.5mm Audio Device Adapter
2403-29572-ADT	Trulink Wireless USB To VGA Kit	2403-29573-ADT	Trulink Wireless VGA Adapter
2403-29596-ADT	Trulink Wireless USB To VGA And Audio Kit	2403-29599-ADT	Trulink Wireless A/V Adapter (VGA And 3.5mm Audio In One Housing)
2403-29594-ADT	Trulink Wireless USB To 3.5mm Audio Kit		
2403-29598-ADT	Trulink Wireless USB To VGA With Integrated Kit		

TruLink 802.11 products were developed for applications where line of sight is not possible and longer distances are required. Transmission rates are lower than UWB, but wireless transmissions can extend up to 150ft with no line of sight requirement. This is the ideal solution for situations where the computer and the device are in different rooms.
